

1. CHARAKTERISTIKA BLÍZKÉ OSOBY

I will describe my sister. Her name is Michaela. She is twenty years old.

She is slim and taller than me and has medium-length straight brown hair, small lips and nose and light blue eyes.

Five years ago, she wore braces, which luckily, she no longer wears and now she has beautiful straight teeth.

She wears basic clothes, usually blue jeans and white t-shirt and sweatshirt.

She is extremely hard working; she studies all day because she is attending to primary school, and she likes it.

She is sporty type and loves animals. She walks with our dog around our village every day.

Every Saturday she goes to work at a restaurant in Petrovice. She is hardworking but at the same time lazy and tired because of school.

She is a positive person but sometimes she is in a bad mood, and it is better to leave her alone because otherwise arguments arise.

She is a clever, quitter and sometimes selfish person who does not express herself much, more introverted.

In her free time, she likes to draw and paint on a canvas and she is good at it. Also, she likes to play games on her mobile phone.

Our common past time is running and playing with our younger sister. We also like coffee. She prefers to spend her free time with her friends or boyfriend.

We have a good relationship, we sometimes argue, but I still love her.

Lidské tělo.

The human body consists of the head, neck, trunk, and extremities.

The head is the seat of the brain, sensory organs and inlets for air and food. It consists of the cranium, scalp with hair and the face.

The face is made up of the forehead, eyes with eyebrows and upper and lower eyelids, cheeks, nose, mouth with two lips, tongue and teeth, chin, and ears.

The neck joins the head and trunk. It consists of the cervical vertebrae, pharynx, larynx and vessels and nerves. The thyroid gland lies on the anterior aspect of the neck.

On the chest we see two nipples and in women the breast.

Inside the abdominal cavity we find the stomach, liver, gallbladder, pancreas, spleen, kidneys, urinary bladder, small and large intestines, and the internal reproductive organs.

The thorax cavity consists of the heart, lungs, trachea, and esophagus.

The upper extremity is divided into the shoulder, upper arm, elbow, forearm, wrist, and hand. The parts of the hand are back and palm, five fingers.

The lower extremity is attached to the pelvic girdle. It is constituted by the hip, thigh, knee with the patella, lower leg with shin, calf, ankle, and foot.

The foot consists of the instep, sole, arches and five toes.

The skeleton has more than two hundred bones. There are voluntary and involuntary muscles.

The whole body is covered by the skin. There are five senses in our body: sight, hearing, smell, taste, and touch.
